

# ODP – Overview

Tieto On-demand Development Platform is a full scale service that provides integration, maintenance and support of virtual development platforms, dynamic infrastructure and hardware efficiency utilization.

The service includes maintenance of both active and inactive platforms. The platform is set up to meet the environment requirements for development of products, to test products or to run products live.

## Service Contents and Key Benefits

**Full maintenance and support** on hardware, software and security for server, virtual project servers and clients. Covers both active and inactive platforms.

**Fast on-demand scaling** of development projects.

**Full cost control and cost forecast** for the development platform.

### Cost-saving by:

- centralization
- faster application and service delivery
- reduce hardware and energy cost
- built-in data disaster recovery
- reduce the time it takes to provision new servers
- deliver IT Services on-demand
